Brooklyn, NY | (347) 740-2661 | kheadley.dev@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Full-Stack Software Engineer

Full-stack engineer experienced in building and shipping production web applications, from backend architecture through deployment. Comfortable working across the stack, integrating AI tooling into real product features, and using AI-native development workflows to build and ship efficiently without lowering the quality bar. Brings a strong foundation in clear technical communication and cross-functional collaboration.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python

Frontend: React, Tailwind, MUI

Backend: Node.js, Express, REST APIs, Mongoose (MongoDB ODM), BullMQ/Redis (async job processing)

Databases: MongoDB, PostgreSQL, MySQL

Cloud & DevOps: AWS (EC2, Lambda, S3), Docker, GitHub Actions

Testing & Auth: Jest, SuperTest, OAuth (GitHub)

AI: OpenAI API, LangChain, vector databases (Qdrant, Pinecone), AI-native development (Cursor)

EXPERIENCE

Full-Stack Engineer — OSLabs (Open-Source Product Residency)

2025–Present

DevStack AI (DevAI): AI-powered developer onboarding tool for searching codebases and documentation using natural language.

- Built a full-stack web application that allows developers to query large codebases in natural language to speed up onboarding.
- Led backend implementation in Node.js/Express, defining API contracts and data models for search, repos, and workspaces.
- Implemented retrieval workflows using embeddings, vector search, and indexed repository context to return traceable, cited answers across JavaScript and Python codebases.
- Built asynchronous repository ingestion and indexing pipelines using BullMQ/Redis for background job processing, keeping code and documentation context current for AI-assisted developer workflows.
- Contributed to the React UI for search/results display, including UX states and API integration, improving usability and reducing onboarding ramp-up time by ~30% (est.).
- Integrated GitHub OAuth to securely authenticate users and manage access across multiple repositories and environments.

Tech: React, Node.js/Express, Python, MongoDB, Qdrant, OpenAI API, LangChain, Redis/BullMQ, AWS

Software Engineer (Contract) — Nooxit

May 2024–Feb 2025

- Built and maintained internal web applications used by 10+ internal users to manage operational workflows and system configuration.
- Developed RESTful APIs in Node.js/Express to support frontend features, handle business logic, and integrate with cloud-hosted databases and third-party services.
- Implemented authentication and role-based access control to support secure multi-user workflows.
- Built AI-powered tools that ingest PDFs and structured documents, generate embeddings, and provide natural-language answers via a React interface.
- Designed and deployed cloud infrastructure on AWS (EC2, S3, managed databases) supporting production environments with high availability.
- Built CI/CD pipelines with GitHub Actions to automate testing and deployments, reducing release time from hours to minutes.

Prior Experience — Program Coordinator, NYC Department of Education (PSAL), 2015–2024

- Coordinated citywide athletics program operations across schools, vendors, and internal stakeholders, managing logistics, communication, documentation, and recurring time-sensitive initiatives.
- Managed procurement, vendor coordination, compliance-related workflows, and tracking/reporting systems to improve accuracy, visibility, and consistency across programs.

EDUCATION

- Codesmith – Advanced Residency for Software Engineering | Remote — 2025
- Level Up in Tech – Cloud & DevOps Training | Remote — 2022–2023 (Project-based curriculum covering AWS services, serverless architectures, containerization (Docker, Kubernetes), Infrastructure as Code (Terraform), and CI/CD pipelines. Training only, not production experience)
- Associate of Arts — Kingsborough Community College, Brooklyn, NY

CERTIFICATIONS

- AWS Developer Associate (2023)
- LPI Linux Essentials (2022)
